Administration Ethics Joseph Byrne 2017-05-15 There are few industries in which decisions are so intently scrutinized by millions of Canadians as the healthcare industry. Each day important decisions concerning the funding and delivery of healthcare are made far from the patient's bed, in the offices of administrators and policy makers. These decisions can have considerable impact on the lives of patients and the practice of healthcare professionals. Whether you are a seasoned executive or an entry-level manager, Administration Ethics is intended to assist you in rendering effective and ethical decisions.

Brimming with engaging examples, this text provides a practical guide to understanding the essential but often challenging areas of ethics theories, principles, codes, and rights, and insightfully illustrates how these concepts are integrated. Administration Ethics goes beyond academic debate and enters the daily practice of health administration. It examines the psychology of decision making, revealing how we sometimes make well-intentioned, but unethical decisions. Each chapter includes illustrative cases pertinent to the ethical management and policy decisions required of healthcare administrators. Featuring a new, user-friendly decision model and designed specifically with the Canadian healthcare system in mind, this volume will be an indispensable resource for both current and future healthcare administrators in Canada.

The Business Plan Reference Manual for IT Businesses Fernando Almeida 2018-12-10 There

is a great worldwide desire to launch new technology-based business. In this sense, and increasingly, entrepreneurship courses have arisen in several universities and many of the courses in the management, administration and engineering areas already offer entrepreneurship curricular units. Throughout those programs, the teams develop key integrated competencies in innovation, entrepreneurship and technology that will ultimately enable the students to create and develop new technology-based businesses. The Business Plan Reference Manual for IT Businesses provides a reference manual for undergraduate and graduate students that intend to launch their start-up business in the IT field. It helps them to create and model the business plan of their business. Therefore, this manual is mainly aimed at instructors who want to offer a practical view of the process of modeling, designing and developing an IT start-up. Additionally, it can be individually used by entrepreneurs who wish to launch their start-up businesses in IT field. The

structure of the book was defined taking into account different approaches to the construction of the business plan, which basically consider a disaggregation of some of these chapters in others smaller (e.g., marketing plan into products/services and market, financial plan into investment plan and economic-financial projections). We chose to aggregate these dimensions into a single chapter, which in our view facilitates the process of analyzing a business plan. It is also relevant to mention the inclusion of "Chapter V - Prototype description" which is innovative and intends to take into account the application of this business plan template to the information technology sector.

Differential Models Alexander Solodov 2005

Differential equations are often used in mathematical models for technological processes or devices. However, the design of a differential mathematical model is crucial and difficult in engineering. As a hands-on approach to learn how to pose a differential mathematical model the authors have selected 9 examples with important practical application and treat them as follows:- Problem-setting and physical model formulation- Designing the differential mathematical model- Integration of the differential equations- Visualization of results

Each step of the development of a differential model is enriched by respective Mathcad 11 commands, today's necessary linkage of engineering significance and high computing complexity. TOC: Differential Mathematical Models.- Integrable Differential Equations.- Dynamic Model of the System with Heat

Engineering.- Stiff Differential Equations.- Heat Transfer near the Critical Point.- The Falkner-Skan Equation of Boundary Layer.- The Rayleigh Equation: Hydrodynamic Instability.- Kinematic Waves of Concentration in Ion-Exchange Filters.- Kinematic Shock Waves.- Numerical Modelling of the CPU-board Temperature Field.- Temperature Waves.
